Sara Bakhshian Shahrbabaki

Senior Consultant

Relevant Qualifications

- Bachelor of Science – Occupational Health Engineering
- AIOH Associate Member (Australian Institute of Occupational Hygienists)
- OHSAS 18001:2007-IMQ Academy (2007)

Professional Overview

Sara is a Senior Consultant at Getex with more than 12 years of experience in occupational hygiene and workplace health and safety. She specialises in workplace hazard identification, occupational exposure assessment, physical and chemical hazard monitoring, ergonomic assessment, risk assessment and technical report preparation, with particular technical depth in noise assessment, airborne contaminant and dust monitoring, lighting assessment and ergonomic risk assessment. Before joining Getex, she worked across healthcare and industrial environments in Iran, conducting workplace assessments and communicating occupational health risks and recommendations to workers and management. She is currently building on this technical background within the Australian WHS framework.

Occupational Hygiene – Select Experience

Sara has carried out occupational hygiene field assessments across healthcare, hospital and industrial settings, with expertise in noise assessment, lighting assessment, ergonomic assessment like RULA, REBA and QEC and risk assessment methodologies including FMEA and JSA.

Alborz University of Medical Science, Iran (2009-2022)

Sara conducted occupational hygiene inspections across a range of small-scale industries under the supervision of Alborz University of Medical Science. The work included personal noise monitoring, lighting assessments and ergonomic posture assessments, with appropriate control measures recommended in each case. She also conducted an ergonomic assessment of approximately 121 university healthcare staff using the Rapid Upper Limb Assessment (RULA) method, alongside an assessment of occupational fatigue among the same group.

Kish Hospital, Iran (2016)

Sara conducted a comprehensive occupational risk assessment at Kish Hospital using FMEA methodology, identifying chemical, physical, biological and ergonomic hazards. The assessment also included occupational noise and lighting measurement, with findings and control recommendations communicated to relevant departments.

Industrial Occupational Hygiene, Iran (2008)

Sara conducted occupational hygiene assessments across major industrial facilities, including oil refineries and power generation plants. The work included exposure monitoring for volatile organic compounds, inhalable and respirable dust, noise and lighting.
